

Fruit Ninja

User Guide

Fruit Ninja is a hit game apps in iOS and Android in which you slice fruit falling from the sky.. Slicing the fruits is a pretty easy task but if you want to earn more points and become a ninja master, you have to do more than slicing fruit by fruit. Here's how you play fruit ninja and rack up points as a master ninja.

1. Choose Classic or Load game:

Once you open the game a welcome window is shown and you are free to choose between loading the saved data or starting a new game with a current score zero you can also reset the data by pressing the reset button. No matter which mode you choose, the objective is the same and that is to slice as many fruits as you can.

2. Get Combos:

If you really want to rack up points, don't slice the fruits one by one. Instead create combos by slicing 2 or more fruits simultaneously or with one swipe. The number of fruits you slice in each combo earns you the same number of points in addition to the normal score. For example, you get three extra points if you have a 3-fruit combo.

3. Slice the special banana:

Special bananas mean huge extra points. Try to slice the banana so you can have 12 seconds of considering each fruit you slice with two points.

4. Slice the magic bean:

Try to slice the magic bean so you can have one extra life if you have less than three lives or if you have a complete set of lives then your score is increased by 25.

5. Be Careful of Bombs:

Bombs are the traps you have to avoid. However, your game ends once you hit a fatal bomb or you lose a life if it's a dangerous one so be careful!

6. Game over:

You lose the game in one of those cases:

- Slicing Fatal bomb.
- Losing all your lives (happens when dropping a fruit or slicing a dangerous bomb).

7. Slice the watermelon:

Once you lose the game a score window is shown with your score and the highest score if you beat the highest score while you are playing then your current score will be equal to the highest score.

8. Music:

You can always turn the music sound of by clicking in the sound button on the right side of the screen.

9. Reset:

You can reset the game by clicking on the reset button and this will cause all the data saved to be deleted so that the highest score returns back to zero.

10. Pause:

You can pause the game while playing by clicking on the pause button and at that time a save button is shown and you can click on it to save your data .Don't worry if you passed the highest score the game saves automatically so that if the game shutdown you can always return to the last state by loading the game. When you pause the game you can also press the exit button to quit the game
